DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/16/2007 has been entered.

Rejections Withdrawn

2. The 35 U.S.C. 102(b) rejection of claims 1-4 anticipated by Harada et al. (wo 99/65095) has been withdrawn due to applicant's amendment filed on 4/16/2007.
3. The 35 U.S.C. 102(e) rejection of claims 1-4 anticipated by Harada et al. (6440607) has been withdrawn due to applicant's amendment filed on 4/16/2007.

New Rejection

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Tani et al. (20020197530).

As to claim 1, Tani et al. discloses a nickel metal hydride storage battery comprising a positive electrode comprising nickel hydroxide (page 13 paragraph 0152) as a active material, a negative electrode comprising a hydrogen absorbing alloy containing aluminum (page 4 paragraph 0038 and page 5 paragraph 0040), a separator (page 4 paragraph 0038) and an alkaline electrolyte (page 4 paragraph 0038), wherein a complex forming agent which forms a complex with aluminum ion is included in the negative electrode (page 11 paragraph 0125)). As to claim 2, Tani et al. discloses the complex forming agent is an aromatic carboxylic acid (page 11 paragraph 0125, citric acid). As to claims 3-4, Tani et al. discloses that the layer comprising a hydroxide of an element is yttrium and is formed on a surface of the positive electrode active material (page 15 paragraph 0196).

Response to Arguments

5. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.
